+31 6 24 75 65 82 thibaut@stacktful.com
Amsterdam, NL

Summary – Software Engineer with 7+ years of experience in Python-based greenfield projects, with background in engineering, robotics & AI. Specialised in end-to-end development of cloud-native (web) applications (B2B, SaaS), in Agile/Scrum multidisciplinary teams within start-ups and international corporations. Strong advocate of clean code, automated workflows and clear communication for optimal collaboration.

Experience

Present – Jan 2026

Software Engineer (GenAI) @ Alliander — Arnhem, NL

Voltix Agent – Internal Python package for building and deploying AI Agents within Alliander IT landscape :

- Developing package including architectural design, implementation, testing, documentation and deployment.
- Prototyping Agentic AI use cases and demonstrating Voltix Agent's capabilities to internal stakeholders.
- Creating comprehensive catalogue of Agent skills & instructions to improve workflow, productivity and code quality.
- Collaborating with cross-functional teams to integrate Voltix Agent into existing IT landscape.
- Providing training and support to internal developers on using Voltix Agent for building and deploying AI Agents.

Python | PydanticAI | ReactJS | TypeScript | Tailwind CSS | Vite | AWS | Snowflake | Atlan | CI/CD | SonarQube | Dynatrace | Git | GitHub | Agile (Scrum)

Dec 2025 – Jun 2025

Software Engineer (Freelance) @ Bol.com — Utrecht, NL

Project StA – Python-based discrete event simulation of warehouse processes for logistics optimization :

- Developed highly configurable discrete event simulation software in Python to model and optimize warehouse processes.
- Collaborated with logistics experts to translate warehouse processes into accurate simulation models and scenarios.
- Optimized simulation performance and scalability to handle large datasets and complex scenarios, enabling faster insights and decision-making.

Python | SimPy | SQLAlchemy | PostgreSQL | SQL | Google Cloud | BigQuery | Looker Studio | CI/CD | Git | GitLab | Agile (Scrum)

Present – Feb 2025

DevOps Engineer (Freelance) @ Louwman Group — Den Haag, NL

Trimbel®– cloud-native platform for automotive data management and analytics :

- Setting up platform's Infrastructure-as-Code (Terraform, Azure) and CI/CD pipeline (Azure DevOps).

Azure | Terraform | CI/CD | Git | GitHub | Azure DevOps | Agile (Scrum)

Dec 2024 – Jun 2024

Backend Engineer (Freelance) @ ACT Commodities — Amsterdam, NL

Talos – cloud-native ecosystem of distributed apps handling regulatory reporting of ACT's trading activities :

- Monitored and optimized event-driven regulatory reporting cloud functions, ensuring accurate and compliant daily trade activity submissions.
- Added automations to reporting workflows, reducing operational workload and manual intervention.
- Corrected inaccurate historical reports, enhancing data integrity and regulatory compliance.

Python | Azure | PostgreSQL | CI/CD | Git | Agile (Scrum)

Jun 2024 – Jan 2024

Backend Engineer (Freelance) @ WhiteSpace Solutions — The Hague, NL

AIM®– cloud-native AI-driven web application (SaaS) for well trajectory optimization and planning :

- Repaired REST API server's long broken data import and export endpoints and improved data models.
- Decoupled backend optimization (micro)services from databases to ease workload of algorithm developers.

Python | FastAPI | PostgreSQL | Alembic | Docker | Google Cloud Platform | CI/CD | Git | Agile (Scrum)

Dec 2023 – Jun 2022

Lead Software Engineer + Scrum Master (Freelance) @ Ebitwise — Amsterdam, NL

DashWise®– cloud-native financial dashboard web application (SaaS) for start-ups / scale-ups :

- Developed and built application across full stack (frontend UI, backend API, database, cloud infrastructure).
- Built automated ETL pipeline to create data consumed by dashboards.
- Created CI/CD pipeline incl. testing pipeline, building and cloud infrastructure as code.
- Set up and led Agile/Scrum automated workflows (ClickUp) and automated communication channels (Slack).

Python | Flask | ReactJS | JavaScript | Docker | Google Cloud Platform | BigQuery | Terraform | CI/CD | Git | Agile (Scrum)

Oct 2022 – Jan 2021

Software Engineer & Scrum Master @ Avonic — Delfgauw, NL

CamDirector®– AI-driven multiple camera system for automated target tracking in lecture recordings :

- (Re)built CamDirector's server-side rendered (SSR) application and improved UX design.
- Extensive refactoring to create clean, modular and decoupled software architecture.
- Optimised target tracking software, leading to faster and more efficient tracking performance.
- Performed code reviews and tutoring juniors on software engineering best practices.
- Improved team's Agile / Scrum workflow, incl. setting up project management workflows and automations.

Python | Flask | ReactJS | JavaScript | HTML | CSS | Docker | OpenCV | Linux | CI/CD | Git | GitHub | Agile (Scrum)

Dec 2020 | Software Engineer @ Fleet Cleaner — Delft, NL
Dec 2018

FLS Localization – Localization system for ship-hull-cleaning robot based on Forward Looking Sonar (FLS) images :

- Delivered proof-of-concept for localization system enabling centimeter-level accuracy, based on target tracking by using computer vision in sonar images.
- Developed line detection, target tracking and localization pipelines from the ground up.
- Assisted in sales operations with French business relations.

Python | OpenCV | NumPy | Git | GitHub | Agile (Scrum)

Skills

- REST APIs — Python | Flask | FastAPI | Django | Postman
- Databases — SQL | PostgreSQL | MongoDB | SQLite
- Big Data — Google BigQuery | Snowflake
- Frontends — ReactJS | TypeScript | HTML | CSS | Tailwind
- Testing — Pytest | Unittest | Selenium
- Version Control — Git | GitHub | GitLab
- Cloud Platforms — Google Cloud | Azure | AWS
- CI/CD — GitHub Actions | Cloud Build
- Containerization — Docker
- Infrastructure-as-Code — Terraform | AWS CDK
- Automation — Copilot (SDK) | GitHub Agents
- Agile Methodologies — Scrum | Kanban

Languages

	A1	A2	B1	B2	C1	C2
ENG	●	●	●	●	●	●

Strengths

- Growth mindset
- Complex problem solving
- Pragmatic & result-driven
- Teamwork & workflow optimisation
- Multicultural interpersonal skills

Certifications

AWS Certified Solutions Architect – Associate (SAA-C03) @ Amazon — Online, Remote
In progress (expected completion by Feb 2025)

Education

MSc Mechanical Engineering @ Technische Universiteit Delft — Delft, NL
Specialisation in BioRobotics (Robotics and AI)

- President of Antoni van Leeuwenhoek (AvL) study association's executive board (± 100 active members)
- Autonomous Drone Competition : design of AI computer vision algorithm (Python/C++) for obstacle avoidance, broke record of longest distance traveled without collision
- Vehicle Dynamics Engineer @ Formula Student Team Delft

Python | Matlab | C++ | Robotics | AI (Computer Vision) | Machine Learning | Algorithms

Extracurricular Activities

Feb 2018 | President of Executive Board @ Study Society Antoni van Leeuwenhoek — TU Delft, Netherlands
Jan 2017

- Supervised delegations representing fellow students with regards to educational affairs
- Facilitated networking events and offered career opportunities with academically relevant companies
- Organised activities to keep Dutch & International students socially involved
- Conducted market research for a prosthetics startup (Reboocon Dynamics), our study trip sponsor

Google Workspace | Asana | Slack

Nov 2018 | Research and Development Engineer (Intern) @ NEC — Tokyo, JP
May 2018

MIDoT®– Micro-Identifier Dot on Things object tracking technology :

- Delivered functional prototype for automated speech indexing as part of NEC's IoT research
- Developed software (computer vision, speech recording & data processing pipeline) from scratch
- Designed and assembled hardware (housing, sensors and circuitry) of embedded system
- Presented results at the IEEE 5th World Forum on Internet of Things 2019 in Limerick, Ireland

Python | OpenCV | NumPy | Arduino | Git | GitHub

Feb 2016 – Aug 2015 | Vehicle Dynamics Engineer @ Formula Student Team Delft — Delft, NL

Formula Student – International single-seater formula-style racecar engineering competition for university students :

- Created models (Matlab) to analyse the car's performance w.r.t. its geometrical parameters
- Optimized the car's geometry to obtain the highest vehicle dynamics performance
- Our team went on to win all competitions we participated in

Matlab | Git | GitHub

Additional Information

Interests Traveling (± 40 countries) — Technology — Psychology — Philosophy — Languages — Dancing (salsa)

Sports Field Hockey (played at National U17 League) — Fitness — Skiing — Karting — Surfing — Football
